

**Project Title:**

Landover Hills Municipal Data Integration into the Maryland Open Data Portal

**Date:**

Mar 12, 2025

**Group Members:**

Zulykath Lucero, Shishir Poreddy, Ruth Ayele, Arafat Bhuiyan, Avindra Mahesh, Daniel Araj

**What has the team accomplished since the last time you met with the instructional team?**

- The team has suggested the creation of a Dashboard that implements existing data, such as budget data. We have looked at other municipalities on the Maryland Open Data Portal website and come to an understanding that we need further data collection from the clients end in order to create specific dashboards regarding the data being discussed. Ultimately, we have accomplished an understanding with the client regarding the potential for creating dashboards.

**What is the team hoping to accomplish in the next two week sprint?**

- We hope to accomplish this by creating a template that informs the client about the types of data we need to collect in order to create dashboards that would discuss data.
- Web Scrape existing data in order to create a template and wait for approval regarding whether they chose to implement this idea or not.
- We plan on creating a detailed strategy that allows the client to manage the data for the dashboard in the long term.

**What barriers or challenges has the team encountered?**

- One challenge that we faced was the lack of existing data that our client currently possesses. We hope to tackle this by creating templates and detailed strategies about how to collect the data we need.
